## APPLICATION FOR OBSERVING TIME

## LARGE PROGRAMME

PERIOD: **77A**

To be submitted only to: [proposal@eso.org](mailto:proposal@eso.org)

### Important Notice:

By submitting this proposal, the PI takes full responsibility for the content of the proposal, in particular with regard to the names of COIs and the agreement to act according to the ESO policy and regulations, should observing time be granted

1. Title	Category: <b>A-3</b>							
The VST ATLAS								
2. Abstract / Total Time Requested	Total Amount of Time: 540h      Total Number of Semesters: 4							
<p>We propose to make an ATLAS survey with VST. The initial aim is to survey 4500 deg<sup>2</sup> of the Southern Sky at high galactic latitudes to comparable depths to the SDSS in the North. The VST ATLAS will be the first step towards a panoramic digital survey of the Southern Sky in the optical bands. The ATLAS will complement the VISTA IR ATLAS proposed in the South. A prime science driver is to determine the dark energy equation of state by detecting ‘baryon wiggles’ in the power-spectrum of <math>\approx 450000</math> <math>z \approx 0.6</math> Luminous Red Galaxies (LRGs), selected from the VST ATLAS for spectroscopy via the new AAOmega instrument. Other uses include the colour selection of QSO candidates out to <math>z \approx 7</math>. Further potential dark energy probes exist including LRG z-space distortion, the Integrated Sachs-Wolfe Effect and the dependence of QSO lensing on redshift. Finally, the VST ATLAS+AAOmega will feed VLT with rare galaxy and QSO targets for high resolution spectroscopy, constituting a new and uniquely powerful tool for survey cosmology.</p>								
3. Run	Period	Instrument	Time	Month	Moon	Seeing	Sky Trans.	Obs.Mode
A	77	OMEGACAM	40h	apr	d	$\leq 1.4''$	CLR	s
B	77	OMEGACAM	28h	apr	g	$\leq 1.4''$	CLR	s

5. Description of the proposed programme

A) Scientific Rationale: See attached proposal

B) Immediate Objective: See attached proposal

C) Telescope Justification: See attached proposal

D) Observing Mode Justification (visitor or service): See attached proposal).

**6. Experience of the applicants with telescopes, instruments and data reduction**

See attached proposal.

**7. Resources available to the team, such as: computing facilities, research assistants, etc.**

See attached proposal.

**8. Special remarks:**

See attached proposal.

**9. Justification of requested observing time and lunar phase**

Lunar Phase Justification: See attached proposal.

Time Justification: (including seeing overhead) See attached proposal.

Calibration Request: Standard Calibration

Convert to a normal programme? No

**10. Report on the use of ESO facilities during the last 2 years**

N/A

**11. Applicant's publications related to the subject of this application during the last 2 years**

da Angela, J., Outram, P.J. & Shanks, T., 2005 MNRAS 361, 879: Constraining  $\beta(z)$  and  $\Omega_m$  from redshift-space distortions in  $z \approx 3$  galaxy surveys

da Angela, J. et al. 2005 MNRAS 360, 1040: The 2dF QSO Redshift Survey- XV. Correlation analysis of redshift-space distortions
