

ATLAS meeting schedule

11.00 Coffee

11.30 ATLAS Status - Tom Shanks

11.50 ATLAS Photometry issues - Nigel Metcalfe

12.10 Galaxy Photometry Issues - Behzad Ansarinejad/Ruari Mackenzie

12.30 lunch

13.00 CASU update

13.20 WFAU update

13.40-15.00 Discussion

15.00-15.30 Action plan

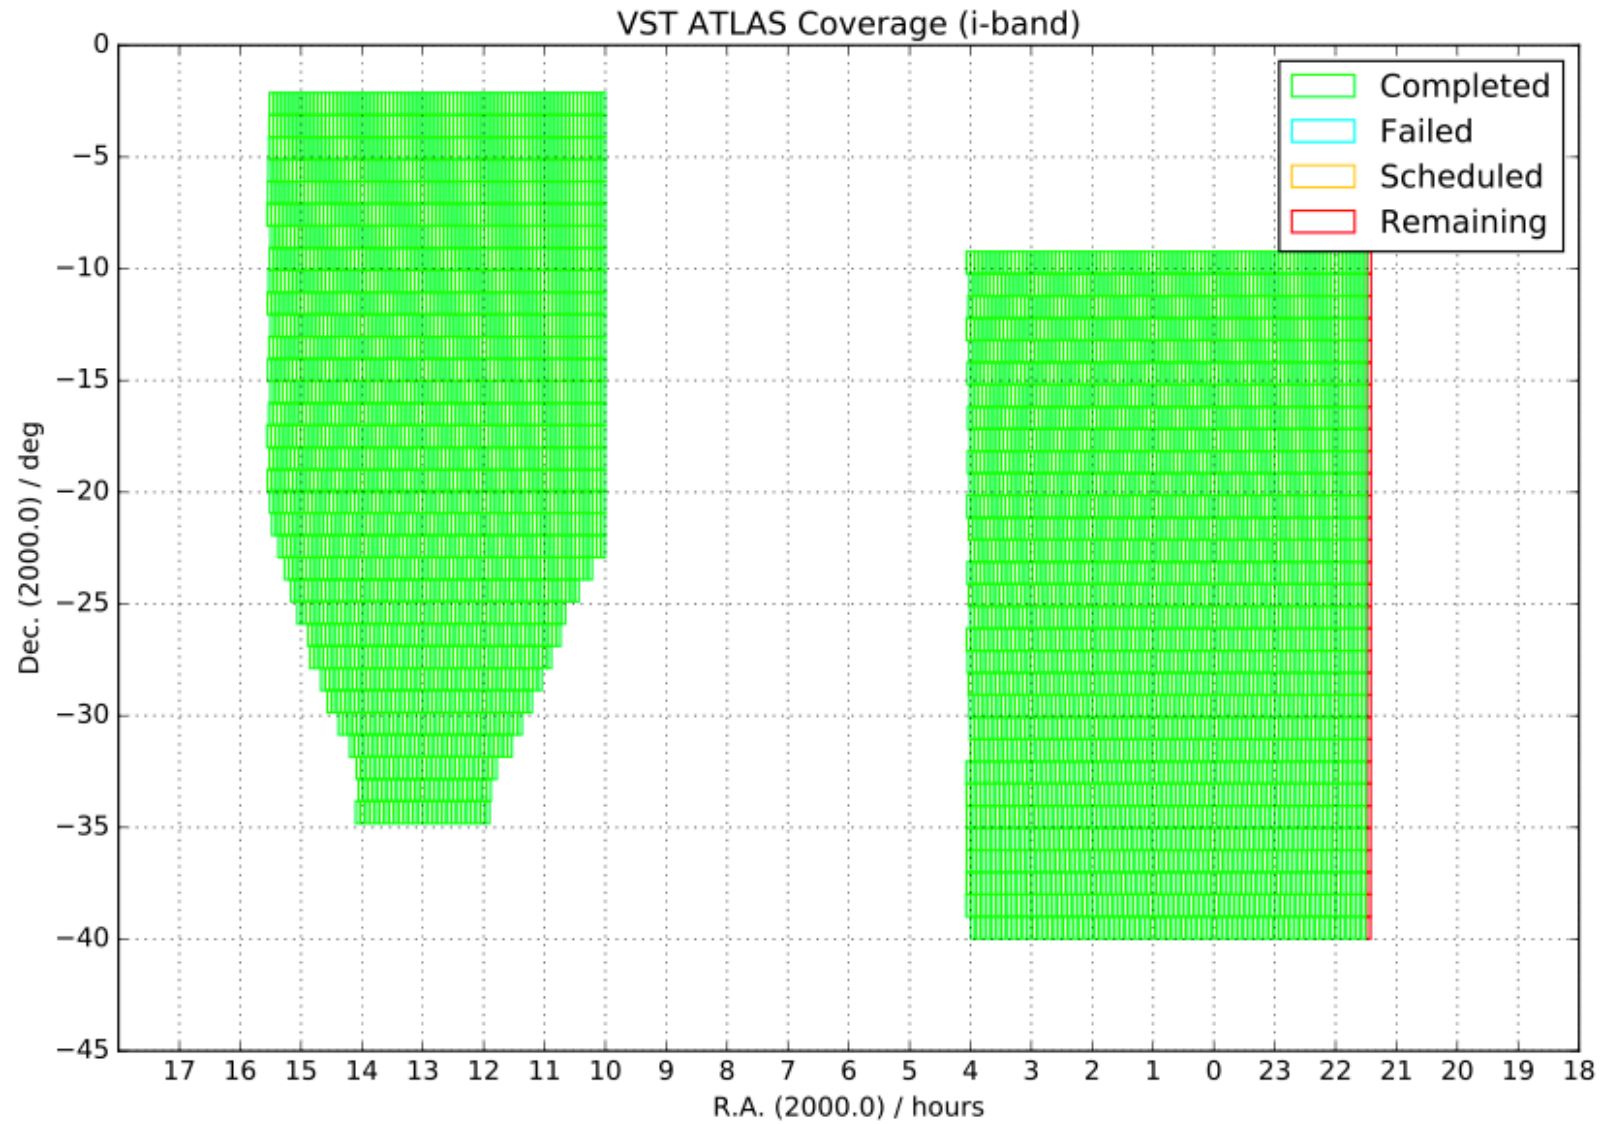

VST ATLAS Status

Tom Shanks, NM, JRF et al

Survey completed- u,g,r

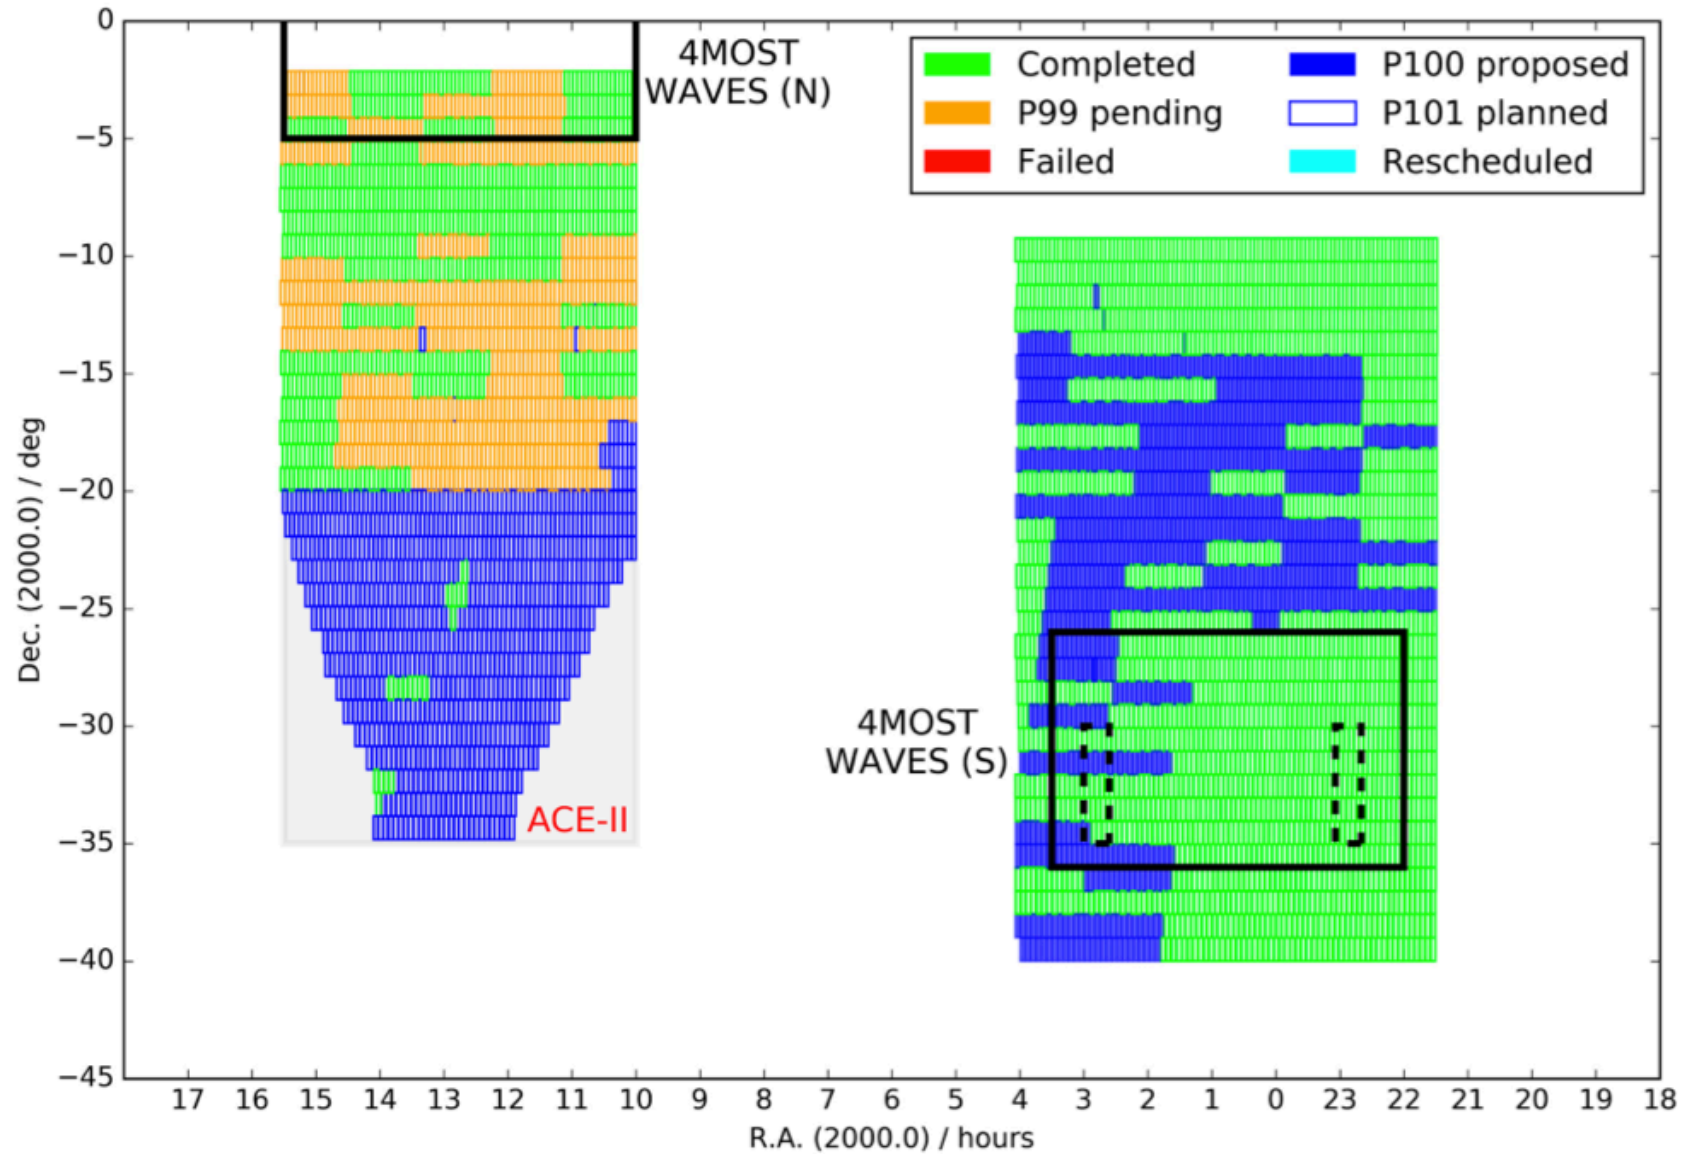

i,z completed

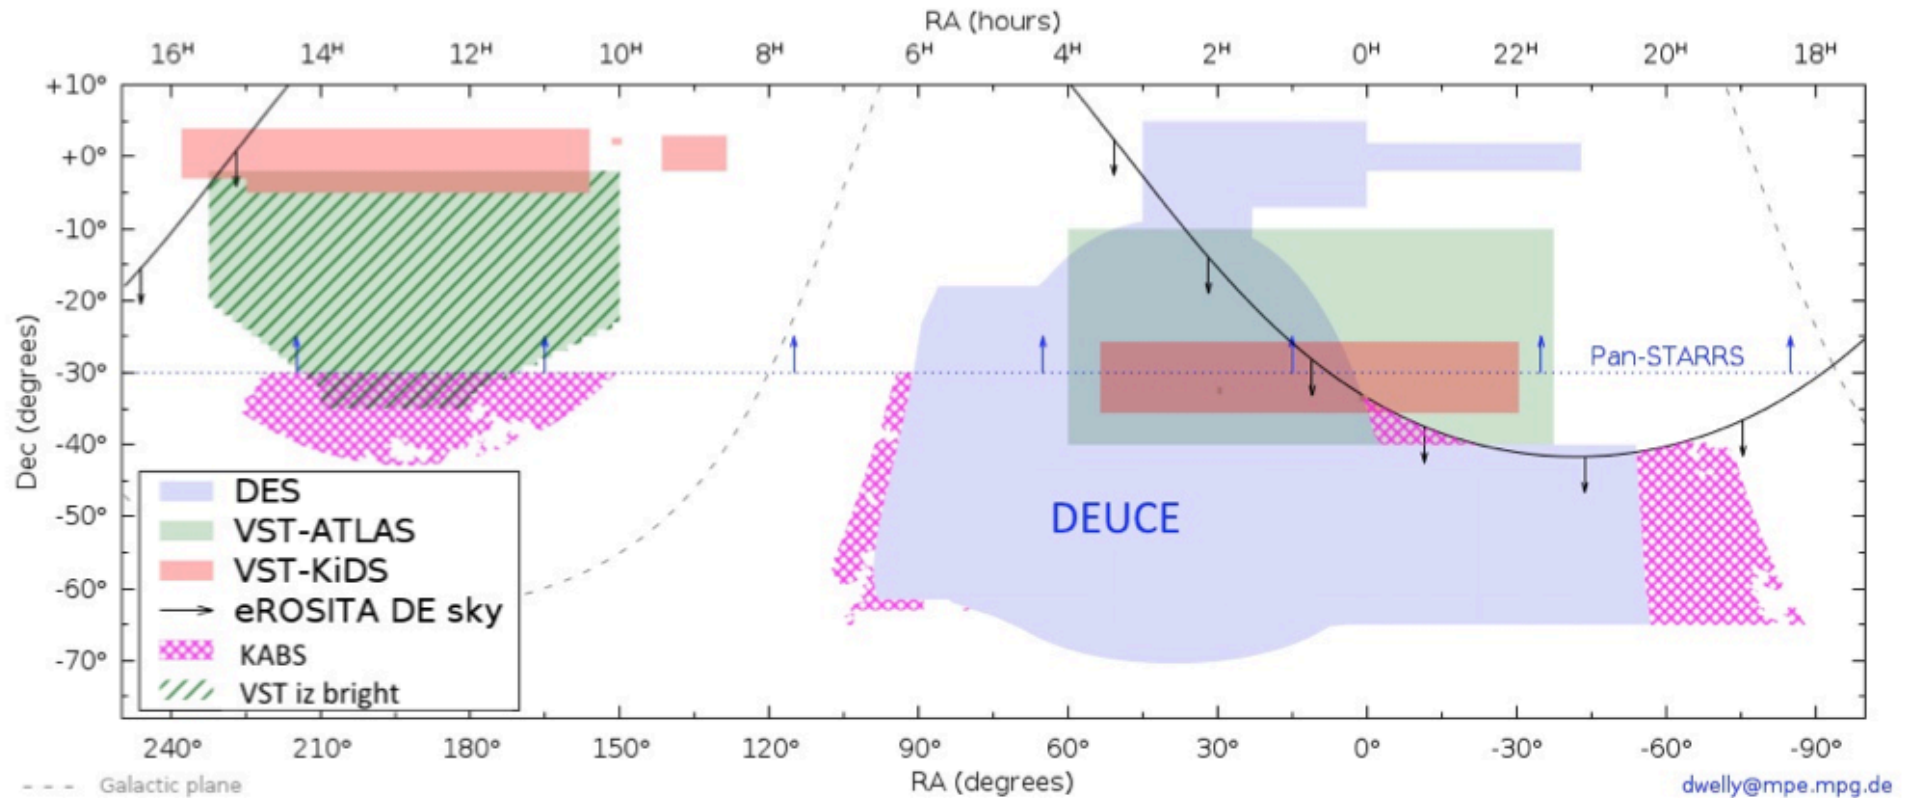

ATLAS extensions ongoing

- ATLAS Chilean extension (ACE-I or UVAS) - doubles u exposure over 4700deg²
- ATLAS Chilean ugr extension (ACE-II) – completes ugr in ~600deg² in NGC at Dec<-20
- DES u Chilean Extension (DEUCE) – u-band in non-ATLAS DES area via VST OmegaCam (1400deg²)+CTIO DECam (1400deg² proposed)
- Kilo-ATLAS Bridging Survey (KABS) ugri to deeper depths

ACE-I,-II Status 31/3/17

ATLAS Extensions + eROSITA-dE

Global Calibration

- Various methods:
- APASS – individual+nightly
- Ubercal – Kozlov et al
- Matrix edge overlaps method – as applied by Findlay/Metcalf+Shanks
- Stellar Locus – SLR – Mackenzie
- Pan-STARRS direct + other

i South PanSTARRS1-ATLAS APASS Nightly

i South APASS nightly-individual->anchors

i South PS1-matrix (59% anchors)

i South PS1-Koposov ubercal

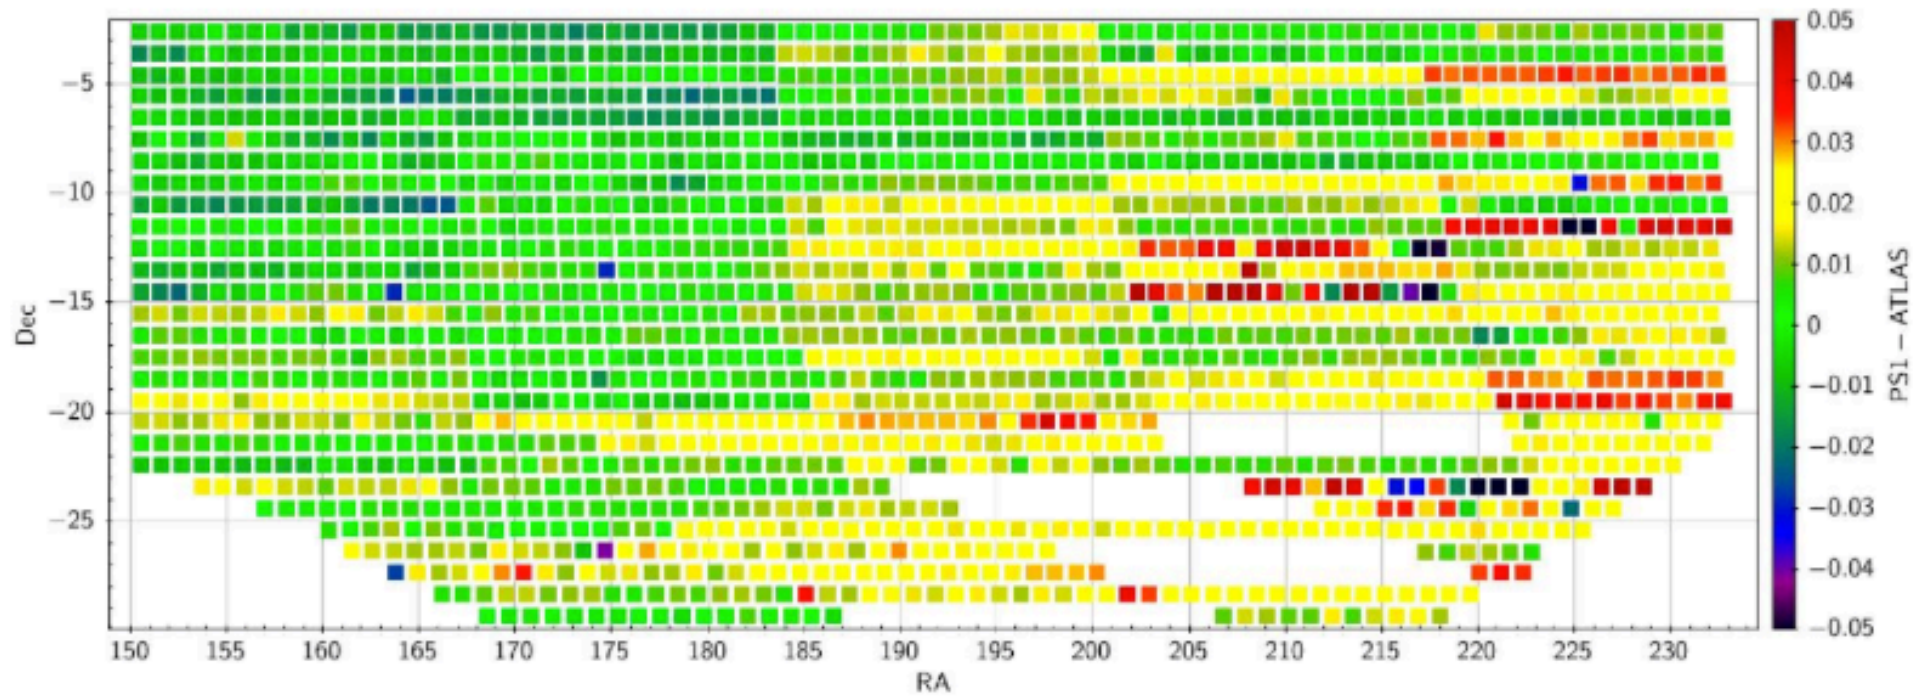

i South PS1-APASS (stars)

i North PanSTARRS1-Nightly

i-band: ($i_{\text{PS1}} - i_{\text{VST}} = 0.0_{\text{PS1}}$)

i N APASS Nightly-Individual -> Anchors

i-band:

i N PS1-Matrix (59% Nightly anchors)

i N PS1-Koposov Ubercal

i-band:

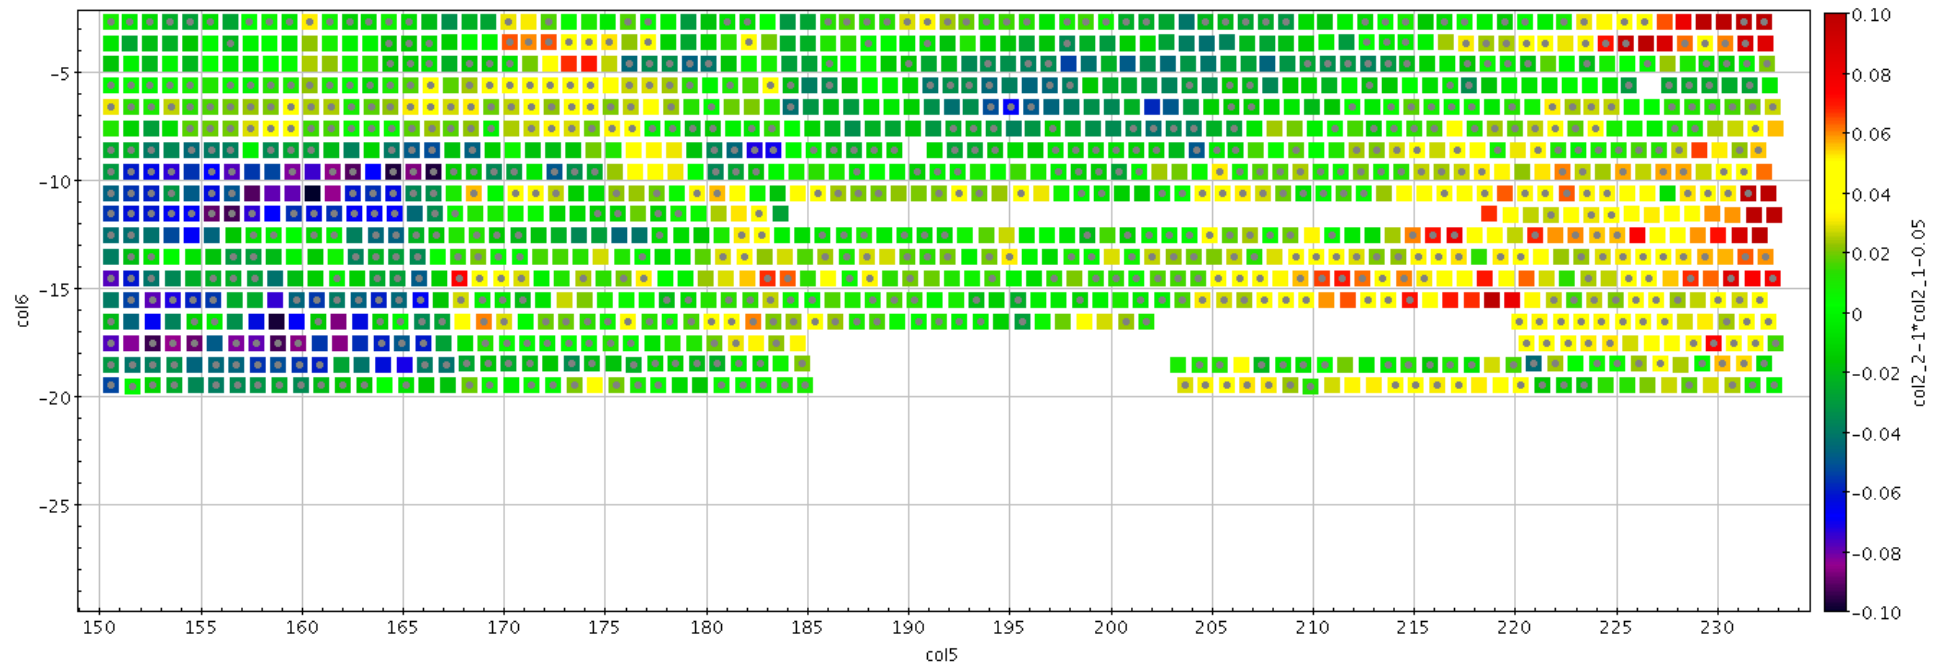

u N PS1-ATLAS APASS nightly

u-band: $(g-r < 0.85: g_{\text{PS1}} - u_{\text{VST}} = -2.7(g-r)_{\text{PS1}} - 0.02)$ $((g-r) \geq 0.85: g_{\text{PS1}} - u_{\text{VST}} = -1.3(g-r)_{\text{PS1}} - 1.5)$

u North PS1-matrix (59% anchors)

Findlay's matrix + anchor edge rejection

Conclusions

- ATLAS complete but ACE-I, ACE-II, DEUCE extensions ongoing
- u-band key for quasar surveys + eROSITA+4MOST
- Global calibration needed 1 year from now
- Possibilities – ubercal, PS1, matrix+nightly, SLR
- Default is matrix+nightly but still working on it
- Particularly on anchor selection
- But other calibration + galaxy photometry issues may dominate....

ATLAS Wish List

- a) illum correction improvements in catalogues
- b) S-G sepn improvement in catalogues
- c) Route to implementing matrix zpts in images and catalogue headers
- d) Forced photometry for griz as well as u
- e) model mags for galaxies and psf mags for stars
- f) Analytic illum corrections
- g) APASS updates to nightly
- h)
